Hi Alec,

I'm attaching the updated 100 metro workbook with the 'at least two' column inserted in front of the 'at least three' column.

I'm also sharing the latest draft along with tables/charts. I've noted where I think it'd make sense to integrate an interactive top 100 metro map in the second finding (indicator to be mapped is the share of adults who are at least doubly disadvantaged—the 'at least two' share in the updated workbook—that users could then toggle from total population to white, black, Hispanic), and the interactive bar charts you've built. We can also add a phrase in the text to explicitly point people to the interactive features.

I remembered the note to add to the interactive...it'd be good to have a note explaining the NAs that pop up. Something along the lines of 'data suppressed due to insufficient sample size'.

Happy to wait on finalizing the terms until we see what Central settles on for the first paper.

The only other point we discussed was to reorder the columns to put "Low income" in the far left in the first set of bars and "At least doubly disadvantaged" in the far left of the bottom set up bars.

Let me know if you have any questions.

Thanks again!

Elizabeth

Some things to talk about:

High level

- Does this presentation convey what it needs to?
- How important is getting a cross-sectional perspective (across metros)?

Low level

- Getting the language right
- Adding in titles, descriptions, etc.
- Margins of error?
